

BROADCAST CROSS-REFERENCE LIST

With immediate effect, the BES and MEDIA product ranges have been consolidated and a new range of BES/MEDIA products has been created. There has been no change in functionality just enhancement in the products appearance, noticeably a higher quality designation strip allowing greater visibility. Please refer to these new product codes in the 1st column. For ease of identification, we have listed the previous BES and MEDIA part numbers for easy cross-reference in columns 3-6. In essence we have chosen best of breed, meaning that the Video and Audio panels and accessories are the BES style and the MDU and data patch panels are the MEDIA product. When ordering please specify if you would like the BES or MEDIA logo on the product.

We have continued with investment in our UK factory – our new 1, 2 and 3U extrusion is now machined in-house, giving greater flexibility resulting in shorter lead times and also price benefit, which we have passed to our customers

Audio and Video Jackfields are available in Storm Grey, Dawn Grey and Black, as standard.

Mains distribution units are available in Black, as standard.
